DETAILED ACTION

This Office Action is in response to:

05/04/2009 – Applicant response to first action
11/04/2008 – First non-final action
08/18/2008 – Applicant response to second restriction
07/18/2008 – Second restriction requirement
04/09/2008 – Applicant response to first restriction
01/13/2008 – First restriction requirement

Response to Amendment

1. The Amendment filed May 4, 2009 has been entered. Claims 1, 3-6, 10-12 remain pending in the application. Claim 1 has been amended. Claims 1, 3-6, 10-12 are pending for examination.

Response to Arguments

2. Applicant's arguments with respect to the claims have been considered but are moot in view of the new ground(s) of rejection.

Drawings

3. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the “at least two signal inputs” and “a high-pass filtered version of the resultant error-corrected signal” in claim

Art Unit: 3766

1, lines 2 and 8-9, respectively, must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 1, 3-6, 10-11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Braun (US Pat 6,050,940) in view of Drakulic (US Pat 5,678,559).

6. Regarding claim 1, Braun discloses claimed invention including providing at least two signal inputs (figs. 3 and 9), providing an error correction parameter and combining at least one signal with the error correction parameter (col. 7, lines 38-46), and amplifying the resultant signal (col. 7, lines 23-30). Braun does not expressly disclose the error correction parameter comprises, at least in part, a high-pass filtered version of the resultant error-corrected signal. Applicant admits on [0005], lines 10-14, of the Specification that typical prior art response has been to provide signals through a differential amplifier and then to pass the resultant signal through a high pass filter. Furthermore, Drakulic teaches sequentially providing a signal through a differential amplifier 20 (fig. 3) and a high pass filter 22 (col. 4, lines 8-9). It would have been obvious to one of ordinary skill in the art at the time the invention was made to modify Braun to include applying a high pass filter after development of the error-corrected signal as taught by Drakulic in order to eliminate the DC component of the signal introduced to the high pass filter (col. 5, lines 4-6).

7. Regarding claims 3-6, 10 and 11, see the reasons stated in paragraph 5 in the Office Action of November 4, 2008.

8. Claim 12 is rejected under 35 U.S.C. 103(a) as being unpatentable over Braun in view of Gudaitis (US Pat 5,392,784). See the reasons stated in paragraph 7 in the Office Action of November 4, 2008.

Conclusion

1. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
